Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments:

First, attorney urged the Lindner reference does not teach alkali metals. The Deeba reference is focused on a NOx catalyst and that all of his examples only use alkaline earth metals, but the alkali metals were used optionally. Examiner disagreed because Deeba specifically lists all of the alkali metals components at col. 28, claim 4. Thus, the alkali metals could also be employed for the catalyst. Second, attorney urged the combination of the Lindner reference and the Deeba reference is improper since there is no teaching in neither reference to solve the same problems as in applicants' invention. Examiner did not find attorney's urging was persuasive because both reference teach the same field of art, which is for treatment of exhaust gases including nitrogen oxides (or NOx). It is also appears to the examiner that the newly submitted European Patent (EP 0657 204 A1) reads on at least claim 1 because it discloses the claimed catalyst with a carrier including the claimed substance and a NOx adsorbent containing alkali metals. Examiner also indicated will update the search.

(A fuller description, if necessary, and a copy of the amendments which the examiner agreed would render the claims allowable, if available, must be attached. Also, where no copy of the amendments that would render the claims allowable is available, a summary thereof must be attached.)

i) ☒ It is not necessary for applicant to provide a separate record of the substance of the interview (if box is checked).
